INTRODUCTION

PRINCIPLES OF PROGRAMMING LANGUAGES

Norbert Zeh

Winter 2018

Dalhousie University

GOAL OF THIS COURSE

Encourage you to become better programmers

Encourage you to become better programmers

($\neq$ Make you better programmers)

THIS COURSE IN A NUTSHELL

Programming paradigms

- Imperative vs functional vs logic programming

Programming paradigms

- Imperative vs functional vs logic programming

Programming language semantics

- Variable binding, parameter passing, life time of variables, ...

THIS COURSE IN A NUTSHELL

Programming paradigms

- Imperative vs functional vs logic programming

Programming language semantics

- Variable binding, parameter passing, life time of variables, ...

What drives these design decisions

- Call stacks, closures, thunks, memory management, garbage collection, ...

THIS COURSE IN A NUTSHELL

Programming paradigms

- Imperative vs functional vs logic programming

Programming language semantics

- Variable binding, parameter passing, life time of variables, ...

What drives these design decisions

- Call stacks, closures, thunks, memory management, garbage collection, ...

Compilation, interpretation, and formal languages

THIS COURSE IN A NUTSHELL

Programming paradigms (1)

- Imperative vs functional vs logic programming

Programming language semantics (3)

- Variable binding, parameter passing, life time of variables, ...

What drives these design decisions (3)

- Call stacks, closures, thunks, memory management, garbage collection, ...

Compilation, interpretation, and formal languages (2)

COURSE MATERIAL

Books:

- Michael L. Scott. *Programming Language Pragmatics*, 3rd ed. (required)
- Hopcroft et al. *Introduction to Automata Theory*. (optional)
- Tucker and Noonan. *Programming Languages*. (optional)
- More relevant books on course website. Some available online.

Slides:

- On website

CLASS, OFFICE HOURS, AND TAS

Class:

- Mon, Wed, Fri: 3:30–4:30

Office hours:

- Tue, Thu 2:30–4:30
- Goldberg 312

TAs:

- TBA

EVALUATION

(A)ssignments:

(M)idterm

(F)inal

EVALUATION

(A)ssignments:

- 10 assignments
- Each has equal weight
- 4 best programming assignments count, 4 best theory assignments count

(M)idterm

(F)inal

EVALUATION

(A)ssignments:

- 10 assignments
  - 5 programming assignments
  - 5 theory assignments
- Each has equal weight
- 4 best programming assignments count, 4 best theory assignments count

(M)idterm

(F)inal

(A)ssignments:

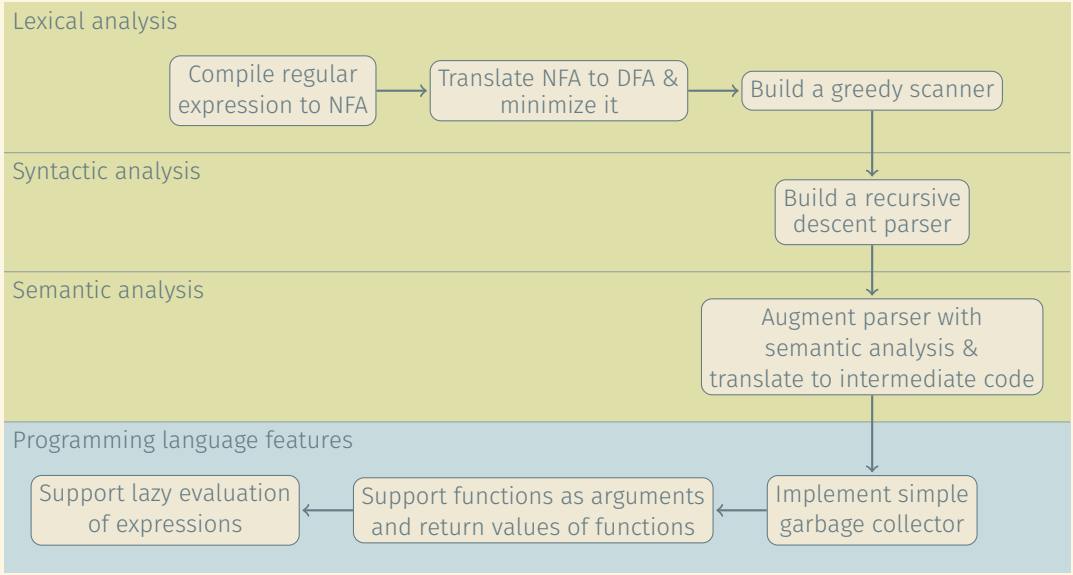
- 10 assignments
  - 5 programming assignments
  - 5 theory assignments
- Each has equal weight
- 4 best programming assignments count, 4 best theory assignments count

(M)idterm

(F)inal

$$\text{Grade} = \max(40\% \cdot A + 20\% \cdot M + 40\% \cdot F, 40\% \cdot A + 60\% \cdot F)$$

THE GREAT COMPILER PROJECT OF 2018 (4 PROGRAMMING ASSIGNMENTS)



GROUP WORK ON ASSIGNMENTS

- Work in groups of up to 3 students (strongly encouraged!)
- Each group submits one joint assignment.
  Every group member gets the same marks.
- Group composition may change between assignments.
- No exchange of information between groups!

Late submissions:

- ... are not accepted.
- Exceptions: You were sick or agreed on an extension with me beforehand (e.g., if there's a wedding in the family)

Academic honesty:

- No exchange of information between groups on assignments.
- All reference material (book, web, ...) must be acknowledged.
- No need to reference material presented in class.
- Any suspected case of plagiarism is referred to the Academic Integrity Officer.

Culture of respect:

- Every person at Dalhousie has a right to be respected and safe.
- We believe inclusiveness is fundamental to education.
- We stand for equality.

LANGUAGES YOU'LL NEED

Used extensively:

- C/C++
- Python
- Java
- Haskell
- Prolog

Mentioned:

- Scala, Ruby, Scheme, ...
