

1. Install WAMP to “C:\wamp64\”:

a. Make sure Microsoft Redistributables are installed:

<https://wampserver.aviatechno.net/>

Go to bottom of page where its says Best way to install Visual C++ Redistributable Packages

Install all the Redistributables as a combined package from here:

<https://github.com/abbodi1406/vcredist/releases>

From there install the latest redistribution package:

“VisualCppRedist_AIO_x86_x64.exe”

b. Now install WAMP

<https://www.youtube.com/watch?v=XYM4dR0W3o>

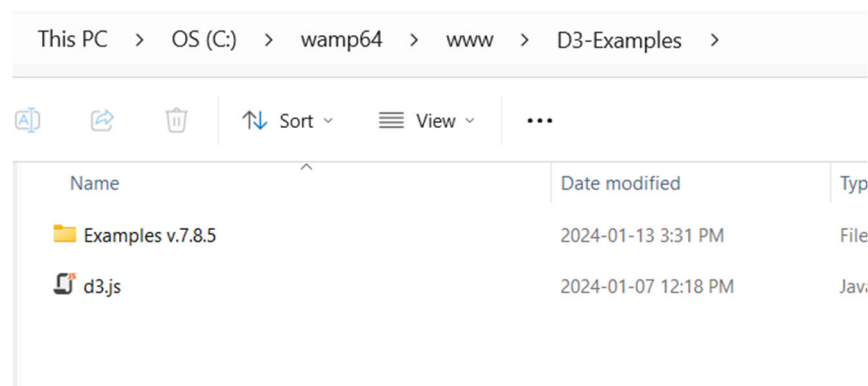

and make sure you set **Chrome** to be the browser

2. Get that latest version of D3 from (check version number):

<https://d3js.org/d3.v7.js>

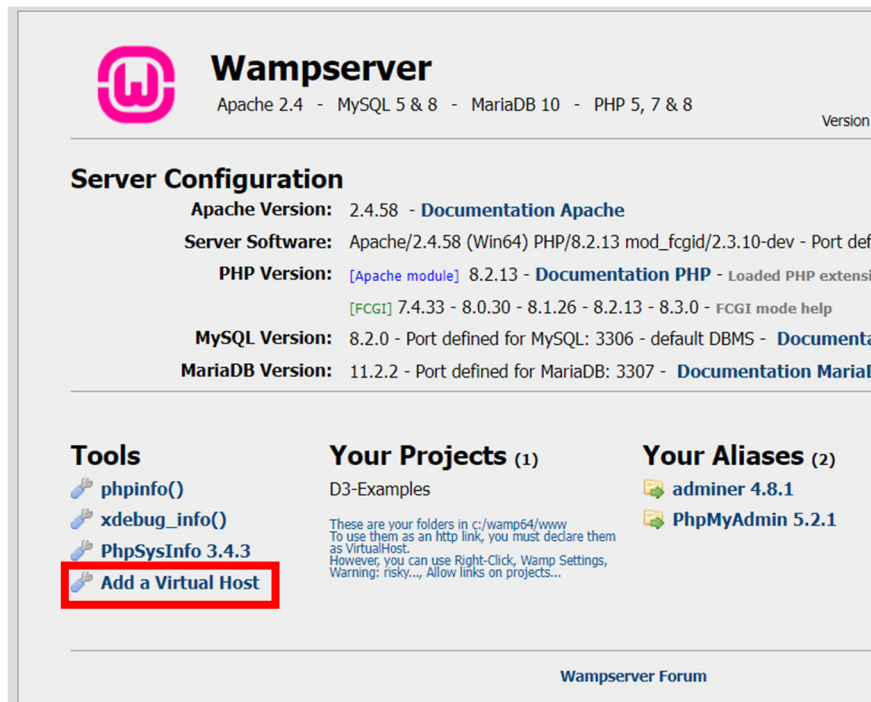

Re-label it to “d3.js”, if you want...

3. Move/copy D3 examples with d3.js to “C:\wamp64\www\D3-Examples”

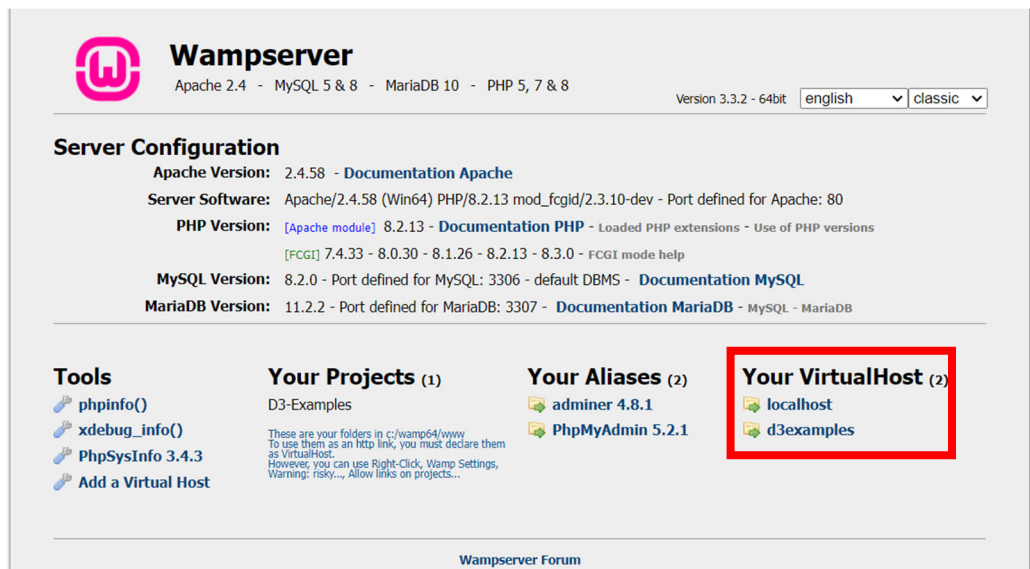

4. Startup WAMP

5. Set "C:\wamp64\www\D3-Examples" to be a VirtualHost called "d3examples"

The screenshot shows the Wampserver control panel. At the top, there is a logo and the text "Wampserver" followed by "Apache 2.4 - MySQL 5 & 8 - MariaDB 10 - PHP 5, 7 & 8". Below this is a "Server Configuration" section with details for Apache, PHP, MySQL, and MariaDB. There are three main sections: "Tools" with links to phpinfo(), xdebug_info(), and PhpSysInfo 3.4.3; "Your Projects (1)" with "D3-Examples"; and "Your Aliases (2)" with "adminer 4.8.1" and "PhpMyAdmin 5.2.1". A red box highlights the "Add a Virtual Host" link in the Tools section.

The screenshot shows the Wampserver control panel with a "Your VirtualHost (2)" section highlighted by a red box. This section lists "localhost" and "d3examples". The "Tools" section now includes "Add a Virtual Host" as a link. The "Your Projects (1)" section still shows "D3-Examples". The "Your Aliases (2)" section shows "adminer 4.8.1" and "PhpMyAdmin 5.2.1". The "Server Configuration" section at the top remains the same.

6. Click on "d3Examples" VirtualHost and run the examples
